Subject: Carbon filtration with carbon reactivators
Date: Sunday, September 20, 2020 10:23:53 PM

Public Comment for the GLWA September 23, 2020 Appointed Board of Water Commissioner's Meeting

New advances in carbon reactivators have made carbon filtration cheaper than it used to be; the reactivation process only loses 7% of its carbon each time it is reactivated; Cincinnati and recently Ann Arbor have gone to this system. We have a right to healthy water ... as well as to affordable water.

P.S. I and my cats drink distilled water.
