		0.	umps & Flocculation Improvements		

Project Significance 111003 RECLASSIFIED INTO THIS PROJECT. Improvements needed to align the existing low lift pumping rate with the Lake Huron WTP production rate per the 2015 WMPU. Currently constant speed pumping forces the WTP to operate in a batch mode. Existing electrical gear for low and high lift pumping units and filter backwash pumps are original to plant, beyond useful service life and need to be replaced to improve reliability, serviceability, maintainability, and efficiency. In addition, the existing flocculators experience high breakage rates, and by the nature of their design are difficult to access for maintenance, etc. They require replacement with a new system that is reliable and easier to maintain. Replacement of phosphoric acid chemical storage tanks and fill piping. Existing flocculator drives are horizontal type with submerged bearings that are expensive to maintain. This evaluation will focus on alternatives that may provide more efficient flocculation and are easier and less costly to maintain.

Year Added: 2010	CIP Type: Project

PROJECT INFORMATION

Scope of Work: Currently constant speed pumping forces the Lake Huron WTP to operate in a batch mode as the low lift pump capacities exceed the high lift pump capacities. Improvements needed to align the existing low lift pumping rate with the Lake Huron WTP production rate per the 2015 WMPU. Replace with new:

1. High-voltage electrical system for high lift pumps

2. Filter rate control valves and appurtenances

3. Flocculator and drives (new technology targeted)

Old CIP# 1227

4. Phosphoric acid storage tanks

Project History:

- Driver: 8 Efficiency
- Challenges: Coordination between existing pumping unit and motor required during design. Critical speed analysis may show pump improvements needed to operate at reduced speeds. Uncovering an innovative rehabilitation design to minimize maintenance of existing drives.
- Other Important Info: *Innovation note: Ensure energy efficiency. Updated project expenses to account for inflation, moved contract start back one year, added GLWA costs. Portions of project were identified in the 2015 Master Plan. Existing flocculator drives are horizontal type with submerged bearings that are expensive to maintain.

Describe Here the Changes from the 2018 CIP to 2019 CIP

rescheduled by moving back a fiscal year for the start, increased construction budget to account for inflation, changed project delivery from DBB to DB; added GLWA engineering costs. Previously presented on 10/24/17 as NEW project 111008.

CIP Version	FY16	FY17	FY18	FY19	FY20	FY21	FY22	FY23	FY24 and Beyond	Total
2018		200	2,500	3,000						5,700
2019			0	0	401	1,611	3,169	4,450	42,757	52,388

- Scope of Work: The work includes replacement of the existing Natural Gas-Fired hot water boilers, back flow preventers, and dehumidification units with related accessories.
- Project History: The Lake Huron WTP was placed in service in 1976. The boilers in the admin building, the chiller, and the dehumidification system have surpassed their expected life span and require replacement.

Driver: 1 - Condition

Challenges: Heating system modifications will be seasonally dependent.

Other Important Info: Complete analysis and the report are attached below.

Related Project: This BCE requests augmentation of the construction budget for CIP No. 1280 from \$2.5 million to \$7.14 million based on the preliminary engineering work conducted by Tetratech under project CS-1732.

GLWA FY 2019-2023 CIP New CIP# 111007 LH WTP Raw Sludge Clarifier and Raw Sludge Pumping System Improvements Old CIP# 1318 **Project Status Project Status Guide: PROJECT SUMMARY** Innovation Active: One or more phases have started, including procurement ☐ MP Right Sizing Active New: First appearance in CIP System Reliability Future Planned: No Phases have Started Cancelled-Closed: All Phases Have Officially Closed or Project Cancelled Pending Closeout: Project at Substantial Completion but not closed out Archived: Project closed or completed for more than one year Reclassified: Projects that have been merged with other projects **Project Title** LH WTP Raw Sludge Clarifier and Raw Sludge Pumping System Improvements Project Significance This project will provide a study and design on the structural integrity, capacity and performance requirements for pumps and piping to meet maximum design flows. The construction services will re-construct the clarifiers, piping and pumps to meet the des Year Added: 2016 **CIP Type:** Project Date Original BCE Prepared: 8/7/2015 **Budget:** Water **Project Classification Level 1: Water** Date BCE Last Updated: 9/18/2017 Project Classification Level 2: Treatment Plants & Facilities Project Engineer/Manager: Todd King **Project Classification Level 3: Lake Huron** Title: Director - Field Services

Phone: (313) 926-8114 Email: Todd.King@glwater.org Manager: Grant Gartrell Managing Dept Water Eng

Project Location: Saint Clair County Fund: 5519 Cost Center: 882111

PROJECT INFORMATION

Scope of Work: The sludge clarifier is integral to the backwash water treatment system and the walls of the clarifiers are severely bowed and in the process of failing. If the clarifier and backwash tank fail, the ability to backwash the Lake Huron WTP filters will be lost and result in the loss of the Lake Huron WTP to the system until a temporary bypass can be arranged.

Project History: The clarifier/backwash structure is original to the plant. The tank walls appear to have been inadequately designed and/or constructed to withstand the loading of the surround soils.

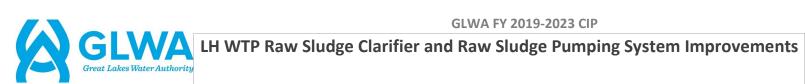

Driver: 1 - Condition

Challenges: Improvements will require coordination with plant operations (filter backwashing).

Other Important Info: n/a

Related Project: This project should be completed prior to cessation of treatment at the Northeast WTP.

Describe Here the Changes from the 2018 CIP to 2019 CIP

Increased construction budget to \$1.3M because detailed design is complete and provided a more accurate estimate of the construction; added engineering fees for CS-1744; added GLWA costs; extended project schedule to account for procurement times and construction of project based on final design documents.

Project Title SW V	VTP High Lift Pump Dischar	ge Valve Actuators Re	placement

oject Significance Existing oil hydraulic high lift valve actuators are leaking oil and at the end of service life. The leaking actuators pose safety concerns and replacement of valve actuators is needed.

Year Added:	2014	CIP Type: Project
Date Original BCE Prepared:	6/26/2014	Budget: Water
Date BCE Last Updated:	9/18/2017	Project Classification Level 1: Water
Project Engineer/Manager: Title:	Shakil Ahmed Engineer	Project Classification Level 2: Treatment Plants & Facilities Project Classification Level 3: Southwest
	(313) 928-0204	Project Location: Wayne County - Outside Detroit
Email:	Shakil.Ahmed@glwater.org	Fund: 5519
Manager:	Grant Gartrell	Cost Center: 882111
Managing Dept	Water Eng	

PROJECT INFORMATION

Scope of Work: This project involves replacement of the valve actuators at the high lift pump system as the existing oil hydraulic actuators are leaking and at the end of their service life.

Project History: n/a

Driver: 1 - Condition

Challenges: Sequencing the demolition and replacement of the existing oil hydraulic power system will require shutdown of individual high lift pumping units.

Other Important Info: n/a

Related Project: none

GLAN Great Lakes Water	SW WTP Low and Hig	GLWA FY 20 h Lift Pumping & Rap ulation & Filtration Sy	id Mix Chamber BFVs, Sluice Gates,	New CIP# 113003 Old CIP# 1283
PROJECT SUMMARY	 Innovation MP Right Sizing System Reliability 	Project Status Active	Project Status Guide: Active: One or more phases have started, in New: First appearance in CIP Future Planned: No Phases have Started Cancelled-Closed: All Phases Have Officially Pending Closeout: Project at Substantial Co Archived: Project closed or completed for m Reclassified: Projects that have been merge	Closed or Project Cancelled mpletion but not closed out nore than one year

Project Title SW WTP Low and High Lift Pumping & Rapid Mix Chamber BFVs, Sluice Gates, Flocculation & Filtration System Improvements

Project Significance Replacing improperly functioning as well as cracked valves and gates, causing operational and maintenance concerns. Low and High Lift Pumping Improvements: Existing pumping station equipment including pumps, motors, switchgear, controls, gates, valves, etc. are all original to the plant and are over-sized for the current and projected system water demands for at least the next 20 years. The station's electrical system and controls are difficult and costly to maintain and have reduced reliability due to age and lack of available parts on the market. Large size and age of pumps and motors are inefficient. Flocculation & Filtration System Improvements: Existing filter media, auxiliary scour, backwash, and related appurtenances are all original to the plant construction (circa 1962) and need to be replaced for reliability and efficiency improvements. Flocculator equipment upgrades were identified in the 2015 WMPU project.

Year Added: 2014 Date Original BCE Prepared: 8/19/2014 Date BCE Last Updated: 9/18/2017 Project Engineer/Manager: Shakil Ahmed Title: Engineer Phone: (313) 928-0204 Email: Shakil.Ahmed@glwater.org Manager: Grant Gartrell Managing Dept Water Eng CIP Type: Project Budget: Water Project Classification Level 1: Water Project Classification Level 2: Treatment Plants & Facilities Project Classification Level 3: Southwest Project Location: Wayne County - Outside Detroit Fund: 5519 Cost Center: 882111

PROJECT INFORMATION

Scope of Work: The work includes study, design, and construction services for the replacement of 2 - 72" diameter butterfly valves, 4 motorized sluice gates, 7 potable sluice gates, and 1 - 36" flag valve. Replacement of high and low lift pumps, motors, motor controls, medium-voltage switchgear, and MCCs. Replace and improve filtration system equipment and components as well as flocculator equipment upgrades.

PROJECT INFORMATION

Scope of Work: Study the existing design and construction of the plant facilities, determine hydraulic and treatment bottlenecks, develop alternative solutions, and identify the best alternative to quickly discharge water plant residuals from plant processes, tanks, channels, etc. to the local sewer system so that water treatment and quality problems are avoided.

Project Title SW WTP Architectural and Building Mechanical Improvements

Project Significance The existing building mechanical equipment (HVAC, dehumidification, plumbing) and architectural features (doors, windows, flooring, furnishings, etc.) throughout the facility are over 50 years old. They are beyond their useful service life and need to be replaced with more reliable, energy efficient systems. The architectural improvements will be limited to the administration and high/low lift buildings on this project. Existing filter media, auxiliary scour, backwash, and related appurtenances are all original to the plant construction (circa 1962) and need to be replaced for reliability and efficiency improvements. Flocculator equipment upgrades were identified in the 2015 WMPU project.

PROJECT INFORMATION

Scope of Work: Replace the dehumidification, HVAC and selected plumbing system equipment with new as well as replacing exterior and interior doors and windows with new. Renovate the existing laboratory. FROM FORMER 113008: Replace and improve filtration system equipment and components as well as flocculator equipment upgrades.

Project History:

Driver:

Challenges:

Other Important Info: CS-1528 water master plan update included these improvements.

PROJECT INFORMATION

Scope of Work: This project includes the study, design (CS-1425) and construction assistance of improvements to the Springwells WTP that includes the replacement of Phosphoric Acid Feed System, rehabilitation of the 1958 Filters, rehabilitation of failed 1930s Filters, Update of Operation and Maintenance Manuals, and addition of polymer systems and controls. Provide construction services to furnish and install new filter media, underdrains, filter valves, and rate controllers; replace the existing filter control consoles, hydraulic control valves with electric control valves, enclosures; add appurtenances to enable automatic backwashing of the filters; provide a Filter Aid Polymer System to the 1930 and 1958 filter complexes; Programmable Logic Controller-based controls for automatic control of the polymer system; install a local instrumentation and controls system.

Project Title SPW WTP Administration Building Improvements & Underground Fire Protection Loop

Project Significance Existing administration building is over 80 years old with many of its facilities being original. The building needs architectural, plumbing and electrical improvements. Improvements will provide reliable fire protection to all plant facilities, replace non-functioning isolation valves and hydrants, provide fire system backflow protection, and bring the fire system into conformance with the requirements of the Dearborn Fire Marshal.

Year Added: 2014	CIP Type: Project
Date Original BCE Prepared: 6/26/2014	Budget: Water
Date BCE Last Updated: 9/18/2017	Project Classification Level 1: Water

Title:	Project Classification Level 3: Springwells
Phone:	Project Location: Wayne County - Outside Detroit
Email:	Fund: 5519
Manager: Grant Gartrell	Cost Center: 882111
Managing Dept Water Eng	

PROJECT INFORMATION

- Scope of Work: The work includes, but not necessarily limited to, removal and replacement of the existing plumbing piping, fittings, valves, plumbing fixtures, and any other necessary accessories. The work also includes relocating the electrical gear from basement to first floor locker room. The existing underground fire protection line loops the Pump, Switch, Boiler and Turbine houses and is supplied water off the high lift headers in the Pump House Header Vault. The supply does not currently have backflow prevention and several branches off the loop used to feed an irrigation system serving the grassy areas covering the reservoirs, 1930 Sed. Basin and 1958 Sed. Basin. Isolation valves and fire hydrants are non-functioning and are beyond their useful life, and the old cast iron piping is susceptible to frequent breaks.
- Project History: The fire loop and appurtenances are original to the existing plant commissioned around 1930. The loop crosses the construction staging area (blue tarps shown in the Project Map from Contract SP-563) in the northeast corner of the site and has been exposed to heavy construction traffic over the years.

Driver: 1 - Condition

SPW WTP Administration Building Improvements & Underground Fire Protection Loop

Old CIP# 1266

- Challenges: Major component of this project includes the relocation/replacement of existing electrical gear located in the basement, and switchover to the new gear and location will need to be seamless. All plumbing needs to be replaced, the majority of which is conc The underground facilities (e.g., electrical duct banks, gas service mains, fiber optic, tunnels, conduits, major pipelines, etc.) at Springwells have been modified several times since initially being commissioned around 1930. The new fire loop will cross a lot of buried utilities and structures, and identification of these facilities and showing them accurately in Contract Documents will be critical to minimizing interruptions/complications during construction. Even then, with all of the underground utilities between the Pump House and Administration Building, and between the Machine Shop/Garage and the 1930 Mixing Chamber, surprises during construction will be difficult to avoid.
- Other Important Info: The project was first identified in the November 2002 Needs Assessment completed by Hazen & Sawyer under CS-1304. The opinion of probable construction at that time for just replacing the existing piping was \$1,076,400.00.
- Related Project: Depending on when the project gets underway, this project may need to be coordinated with current on-going contracts SP-563, SCP-SP-009 and construction contracts resulting from the designs being completed under contracts CS-1671 and SCP-CS-1656. Other planned projects that may be related to this project include paving improvements, underground structure rehabilitation and 72" yard piping improvements/replacement.

PROJECT INFORMATION

Scope of Work: Existing PAC system is not operable. The plant is able to feed powdered activated carbon (PAC) when needed but only through extraordinary measures because the existing PAC feed systems does not operate as intended. The extraordinary measures cause additional operation and maintenance expense and inefficiencies that should be corrected in the long term. Due to the infrequent need to feed PAC, there is not an immediate need to replace the entire existing PAC system at Springwells. If raw water quality deteriorates unexpectedly and taste and odor causing compound concentrations steadily increase, then replacement of the PAC system at an earlier date would be warranted.

Project History: n/a

Driver: 1 - Condition

Challenges: Layout of piping to correct existing problems and drainage difficult. Diffuser replacement/relocation/installation will require plant shutdowns to complete, so it will be seasonal demand dependent.

PROJECT INFORMATION

Managing Dept Water Eng

Scope of Work: This project will evaluate and rehabilitate or replace the sluice gates, guides and hoists at the 1930s Filter Building at the Springwells Water Treatment Plant. These gates and appurtenances have surpassed their expected service life and require rehabilitation and/or replacement for the isolation and operation of the 1930s filters and overall maintenance of various systems at the Springwells WTP. Options for maintenance of flows are limited with current condition of these gates.

Project History: n/a

Driver: 1 - Condition

Challenges: Work will either require sedimentation basins to be shut down and dewatered or the work performed by divers. In either case, portions of the 1930 plant will need to be shut down to complete the work.

PROJECT INFORMATION

Scope of Work: This study involves hydraulic analyses and evaluation of options to transmit finished water from the Lake Huron Water Treatment Plant through the West Service Center in order to provide finished water to the Springwells Water Treatment Plant's high-pressure district. FROM 132010: Lake Huron WTP needs to provide flows to the Springwells high service area while the Springwells raw water tunnel is out of service for repair.

Project History:

Driver: 1 - Condition

Challenges: N/A - Under Procurement. FROM 132010: Coordination with operations critical meet testing of existing valves. Isolation, shutdown and operation of Lake Huron and Springwells WTPs, North Service Center, and other facilities.

Project Significance Six (6) of the seven (7) 72-inch mains leaving the site are original to the 1930 plant construction and consist of riveted steel pipe material. Main No. 7 is a prestressed concrete cylinder pipe material installed in 1958. The steel mains are known to be leaking and are in need of replacement to maintain system reliability. Additionally, isolation valves associated with the 72-inch mains need to be replaced. Other yard piping, including gravity sewers and process piping, need to be assessed and replaced and or rehabilitated.

Managing Dept Water Eng	

PROJECT INFORMATION

Scope of Work: Existing yard piping is original riveted steel from the early 1930s and has experienced leaks. These leaks have potential to disrupt service to Springwells Service area customers. Scope will also include performing a condition assessment, cleaning and replacement/rehabilitation of all gravity sewers (including manholes) and other pressure pipe. Other site improvements will include replacement of access drives, new guard shack, construction trailer utility hook-up station, and other site miscellaneous site improvements. Formerly CIP 1248.

Project History: n/a

- Driver: 1 - Condition
- Complex construction sequencing, and reliability of existing gate valves for isolation will be critical. Design will need to address the isolation valve Challenges: issue, as well as the condition of the existing yard piping being connected to.

PROJECT INFORMATION

Scope of Work: This engineering services contract involves designing a new, more energy-efficient steam heating system for the entire Springwells Water Treatment Plant, including all steam unit heaters, steam piping, condensate return piping, condensate return pumping stations, steam pressure reducing valves, and appurtenances. This project also involves replacing the compressed air piping in the plant used for service air. Once completed, the project will provide energy savings by eliminating extensive steam and condensate leaking currently inherent in the antiquated system. This project includes design and construction administration (CS-1671) and construction (SP-TBD) to replace the leaking steam piping, condensate return piping and compressed air piping throughout the Springwells WTP. The scope of work includes replacing inefficient unit heaters, radiators, condensate return pump stations, pressure reducing valves, regulators, and heating system appurtenances throughout the plant. Once completed, the project will provide energy savings by eliminating extensive steam and condensate leaking currently inherent in the antiquated system.

Project History: n/a

Driver: N/A - Under Procurement

Challenges: Many components of the existing system are original to the existing heating system, are not functioning and need to be demolished/removed.

SPW WTP Steam, Condensate Return, and Compressed Air Piping

Improvements

New CIP# 114011

Old CIP# 1307

Seasonal work and sequencing with the heating season is required.

Project Title	SPW WTP Water Treatment Plant 1930	Filter Building-	Roof Replacement
Project Signific	ance The existing roof over the 1930 filters is le	aking in places an	d poses water quality concerns due to roof leaks.

Year Added: 2016 **CIP Type:** Project Date Original BCE Prepared: 10/11/2016 **Budget:** Water **Project Classification Level 1: Water** Date BCE Last Updated: 10/13/2017 Project Classification Level 2: Treatment Plants & Facilities Project Engineer/Manager: Paula Anderson **Project Classification Level 3: Springwells** Title: Manager Project Location: Wayne County - Outside Detroit Phone: (313) 410-7600 Fund: 5519 Email: paula.anderson@glwater.org Manager: Paula Anderson Cost Center: 882111 Managing Dept Water Eng

PROJECT INFORMATION

Scope of Work: This project encompasses replacement of the existing 1930 Filter Building roofing system, including the built-up roofing material, flashing, roof drains/conductors and sealing cap stones to prevent water from penetrating the building envelop and causing water damage. Construction activity under Contract SP-563 in 2014-2015 revealed that water damage has been on-going and is causing clerestory window lintel deterioration. Additionally, construction traffic under Contract SP-563 has shown the built-up material to be blistering and spongy.

Project History: n/a

Driver: 1 - Condition

Challenges: Seasonal construction work, and construction will require working around new rooftop equipment installed under SP-563.

Project Title SPW WTP Underground Fire Protection Loop Improvements

Project Significance Reclassified into Project 114005: Improvements will provide reliable fire protection to all plant facilities, replace non-functioning isolation valves and hydrants, provide fire system backflow protection, and bring the fire system into conformance with the requirements of the Dearborn Fire Marshal.

Year Added: 201	16	CIP Type: Project
Date Original BCE Prepared: 7/2	28/2016	Budget: Water

Managing Dept Wa	ater Eng	

PROJECT INFORMATION

- Scope of Work: The existing underground fire protection line loops the Pump, Switch, Boiler and Turbine houses and is supplied water off the high lift headers in the Pump House Header Vault. The supply does not currently have backflow prevention and several branches off the loop used to feed an irrigation system serving the grassy areas covering the reservoirs, 1930 Sed. Basin and 1958 Sed. Basin. Isolation valves and fire hydrants are non-functioning and are beyond their useful life, and the old cast iron piping is susceptible to frequent breaks.
- Project History: The fire loop and appurtenances are original to the existing plant commissioned around 1930. The loop crosses the construction staging area (blue tarps shown in the Project Map from Contract SP-563) in the northeast corner of the site and has been exposed to heavy construction traffic over the years.

Driver: 5 - Public Health & Safety

Challenges: The underground facilities (e.g., electrical duct banks, gas service mains, fiber optic, tunnels, conduits, major pipelines, etc.) at Springwells have been modified several times since initially being commissioned around 1930. The new fire loop will cross a lot of buried utilities and structures, and

SPW WTP Underground Fire Protection Loop Improvements

Old CIP# 1407

identification of these facilities and showing them accurately in Contract Documents will be critical to minimizing interruptions/complications during construction. Even then, with all of the underground utilities between the Pump House and Administration Building, and between the Machine Shop/Garage and the 1930 Mixing Chamber, surprises during construction will be difficult to avoid.

Other Important Info: The project was first identified in the November 2002 Needs Assessment completed by Hazen & Sawyer under CS-1304. The opinion of probable construction at that time for just replacing the existing piping was \$1,076,400.00.

Related Project: Depending on when the project gets underway, this project may need to be coordinated with current on-going contracts SP-563, SCP-SP-009 and construction contracts resulting from the designs being completed under contracts CS-1671 and SCP-CS-1656. Other planned projects that may be related to this project include paving improvements, underground structure rehabilitation and 72" yard piping improvements/replacement.

Email:	Timothy.Kuhns@glwater.org	Fund: 5519				
Manager:	Grant Gartrell	Cost Center: 882111				
Managing Dept	Water Eng					

PROJECT INFORMATION

Scope of Work: Much of the yard piping and valve system at Waterworks Park is old and at the end of its service life. Furthermore, the Water Treatment Plant does not have functioning production flow metering as the existing equipment is oversized and non-functioning. Replacement of the yard piping, valve, and metering system is needed at the site.

Project History:

Driver: 1 - Condition

Challenges: Very complicated sequence of construction, and demands of DWSD-R must be maintained along with coordination with 84" between Water Works Park and Northeast WTPs. Condition of existing valves required to complete the work is unknown, and even though it is

Scope of Work: A condition assessment of Waterworks Park Water Treatment Plant has not been completed since the 2004 reconstruction. Continued and periodic inspection of the Water Treatment Plant is needed to maintain a reliable production system, especially given the reliance on Waterworks Park to provide finish water to the Northeast Service Area.

Project History: n/a

Driver: 1 - Condition

Challenges: Coordinating shutdowns required for condition assessment inspections.

Other Important Info: n/a

Related Project: Yard Piping, Valves and Venturi Meters Replacement

PROJECT INFORMATION

Scope of Work: The scope of this project is to address miscellaneous repairs identified as part of the ongoing raw water tunnel inspection project. The scope of these repairs is to rehabilitate structures within the tunnels, shafts and related appurtenances that are identified during the raw water tunnel inspections. Note: due to the scale of the repairs for the Springwells, Pennsylvania and Northeast Tunnels, a separate CIP project request was generated (CIP 1327).

Project History: n/a

Driver: 1 - Condition

Challenges: Maintaining a supply of raw water to Springwells, Northeast and Water Works Park throughout construction to meet finished water production requirements/demands of the system. Specialized/complicated construction.

PROJECT INFORMATION

- Scope of Work: The scope of work is to conduct supplemental investigations to design the repairs for the sections of tunnel identified in CS-1623 as having structural concerns. Three areas were identified with the highest concern being a portion of the Springwells Tunnel near the Springwells WTP.
- Project History: Portions of the Raw Water Tunnel system are approaching 100 years of service. The Northeast Tunnel failed catastrophically in the late 80s due to infiltration of sand through cracking. This project is based on the recommendations of CS-1623, currently underway, which is inspecting all GLWA raw water tunnels.
- Driver: 1 Condition
- Challenges: The tunnels are approximately 80 feet below the surface of the Detroit River. This poses challenges for assessing the extent of damage to the structures, as well as repair. Dewatering the tunnels to repair them will create extensive stresses that must be considered prior to performing the work. Maintaining a supply of raw water to Springwells, Northeast and Water Works Park throughout construction to meet finished water production requirements/demands of the system. Specialized/complicated construction.

GLWA FY 2019-2023 CIP

New CIP# 116002

Old CIP# 1327

Pennsylvania, Springwells and Northeast Raw Water Supply Tunnel Improvements

This project now includes CIP 116001 that was previously included in the CIP 2018-2022 with projected expenses of \$2,5M.

CIP Version	FY16	FY17	FY18	FY19	FY20	FY21	FY22	FY23	FY24 and Beyond	Total
2018		500	2,000	10,000	15,000	4,900				32,400
2019		10	3,625	9,042	5,468	5,468	5,468	3,998		33,079

- Scope of Work: With the departure of Flint and Genesee County from the GLWA system, the water age in the 72-inch transmission main increases to levels where minimum chlorine residuals cannot be maintains. Chlorine booster stations are needed along the 72-inch transmission main to maintain acceptable chlorine residuals.
- Project History: The memorandum of understanding executed between the State of Michigan, City of Flint ,GLWA, KWA, and GCDC regarding a new model contract between GLWA and Flint, reciprocal backup water service between GLWA and GCDC, and GLWA's securing of KWA's raw water rights have all established the need for this CIP.
- Driver: 5 - Public Health & Safety
- Live tapping and line stops on 72" PCCP required for both projects and is specialized construction. Work requires close coordination with operations Challenges: to meet pressure requirements required to tap the pipe.

			Reclassified: Projects that have been merged with other projects

Project Title Replacement of Five (5) PRV Pits of Treated Water Transmission System

Project Significance Replacement of the PRVs to enhance operability of the system and improve control of the system to meet customer pressure needs

Year Added: 2010 Date Original BCE Prepared: 3/12/2010 Date BCE Last Updated: 9/25/2017 Project Engineer/Manager: Eric Kramp Title: Engineer Phone: (313) 999-3875 Email: Eric.Kramp@glwater.org Manager: Grant Gartrell Managing Dept Water Eng

CIP Type: Project Budget: Water Project Classification Level 1: Water Project Classification Level 2: Field Services Project Classification Level 3: Transmission System Project Location: Multiple Counties Fund: 5519 Cost Center: 882111

PROJECT INFORMATION

Scope of Work: This project will replace five existing pressure reducing valves (PRVs) that are defective and no longer controlling downstream pressures. During the replacement, the PRV pits will be upgraded to improve accessibility, provide new sump pumps as needed, and make other necessary improvements.

PROJECT INFORMATION

Scope of Work: Relocate 2.5 miles of 96-inch transmission main currently located in an EPA NPL landfill, a portion of which is submerged in landfill leachate. Relocation includes crossing the Clinton River, coordination with many various authorities having jurisdiction and easement acquisition. Isolation valve installation portion of the project provides the ability to isolate segments of the 96-inch main between Imlay Station and North Service Center for maintenance while maintaining customer expected level of service.

Project History: n/a

- Driver: 2 Performance
- Challenges: Shutdown, isolation and live tapping of the 96" main while maintaining the Lake Huron WTP supply and operations of Rochester Station. Routing and possible property acquisition for both the parallel main and relocation around the landfill.

Other Important Info: n/a

PROJECT INFORMATION

- Scope of Work: Construction of the new 48-inch transmission main along a principal roadway in Romulus. Original water main from Wick station to Ypsilanti station has history of excessive breaks. Additionally, the main is the only principal connection between the two facilities with multiple community Master Meters along its length. A break in this line is disruptive to several communities dependent upon this supply line. The purpose is to improve the transmission system reliability/redundancy.
- Project History: Original water main from Wick station to Ypsilanti station has history of excessive breaks. Additionally, the main is the only principal connection between the two facilities with multiple community Master Meters along its length. A break in this line is disruptive to several communities dependent upon this supply line. The purpose is to improve the transmission system reliability/redundancy.

Driver: 2 - Performance

Challenges: May require shut down of large transmission mains.

PROJECT INFORMATION

Scope of Work: The work consists of replacement of existing distribution mains and existing 24-inch transmissions mains, including gate valve, blow offs, air release valves and other appurtenances along Joy Road from Southfield Freeway to Trinity Road in the City of Detroit. A portion of this work is part of the Retail system (not included in this amount) CIP No. 463. Joy Road is also a significant Wayne County roadway within Detroit and a DDOT bus route.

PROJECT INFORMATION

- Scope of Work: Install approximately 6 Miles of 48-inch transmission main from 8 Mile Road to 14 Mile Road along Haggerty Road. The work will also include connections to the yard piping and reservoir fill line at the Haggerty Booster Station as well as a control valve to regulate flows along the transmission main.
- Project History: The 2015 Water Master Plan Update included a recommendation to evaluate options along this branch of the system to increase redundancy. Since that recommendation, GLWA Water Supply Operations Engineering performed a hydraulic analysis of redundancy alternatives for the 14 Mile Transmission System. The results of the hydraulic analysis was presented at the May 15, 2017 and September 19, 2017 Analytical Work Group Meetings and based on the discussion at these meetings, the Haggerty Loop Option described in the scope of work appears to be the preferred alternative.

Driver: 2 - Performance

Great Lakes Water Au

14 Mile Transmission Main Loop

Old CIP# 1405

- Challenges: Routing and construction staging for the proposed piping in the vicinity of the Haggerty and 8 Mile Intersection appears to be a significant challenge as this intersection is one of the highest traffic volume intersections in Southeast Michigan.
- Other Important Info: GLWA should consider discussing additional connections with the City of Novi as they may desire an additional meter connection along Napier Road.

Romulus was also aware that DWSD has a project pending to place a 48" water main along Wick Road. Placement of the new 48" water main would be disruptive to the retail development traffic entrances/exits facing Wick road. Thus, Romulus asked if the 48" water main project could be expedited so it could be in place at the time of the retail development construction in Spring/Summer 2016. The 48" water main will be placed by Romulus as a part of the pavement upgrade work being pursued by Romulus early in 2016.

PROJECT INFORMATION

Managing Dept Water Eng

Scope of Work: Install approximately 6 Miles of 16-inch transmission main and 3 Miles of 24-inch transmission main from along the Electric Avenue corridor to parallel the existing transmission system in this branch of the system.

Project History: The 2015 Water Master Plan Update included a recommendation to evaluate options along this branch of the system to increase redundancy. Since that recommendation, GLWA Water Supply Operations Engineering performed a hydraulic analysis of redundancy alternatives for the Downriver Transmission System. The results of the hydraulic analysis were presented at the May 15, 2017 and September 19, 2017 Analytical Work Group Meetings and based on the discussion at these meetings, the Electric Avenue Transmission loop option described in the scope of work appears to be the preferred alternative.

2 - Performance Driver:

Challenges: Assuming ownership of the 24-inch transmission main through the City of Trenton may require condition assessment of this portion of pipeline.

PROJECT INFORMATION

Project Title

Scope of Work: Currently there is no means to isolate individual pumping units at the West Service Center. Maintenance on individual units require taking out entire high or intermediate pumping systems without isolation valves.

Project History: n/a

Driver: 2 - Performance

Challenges: Sequence of construction and meeting system demands will need to be coordinated with operations and on-going work to repurpose the Northeast WTP.

Other Important Info: n/a

Related Project: West Service Center Division Valve Replacement, Needs Assessment Study for all Water Booster Stations

PROJECT INFORMATION

Scope of Work: The purpose of this project is to minimize the electrical peak demand power charges associated with cycling water in the reservoir during lowdemand periods. Rather than running a 6,000 HP motor-driven pump for a few minutes daily, a 150 HP motor-driven pump can run for a few hours to do the same work much less expensively.

Managing Dept Water Eng

PROJECT INFORMATION

Scope of Work: This project includes a comprehensive condition and needs assessment study of all water booster stations, exclusive of reservoirs. System wide modelling will confirm station decommissioning as recommended by the 2015 Water Master Plan Update. The condition assessments will include all engineering disciplines, with a focus on variable speed pumping applications to meet changing station demands, DTE rate incentive identification, station metering, valve and yard piping improvements and station bypasses.

Project History: n/a

Driver: 1 - Condition

Challenges: Shutdown, operation and manpower required to cover the condition assessment inspections to complete the work.

PROJECT INFORMATION

- Scope of Work: This engineering/technical services contract involves as-needed engineering and technical services related to geotechnical investigations and related geotechnical engineering, construction materials sampling and testing, environmental media sampling and testing, soils sampling and testing, land surveying, corrosion testing and inspection, computer-aided design, and construction inspection.
- Project History: Given the size and age of the system, as-needed services are required to supplement GLWA staff to identify and define problems that arise and must be addressed prior to the next CIP cycle.

Project History: The GLWA Water Operations division is comprised of five water treatment plants. Each plant has process areas ranging from intake, sedimentation, chlorination, filtration and distribution systems. One of the directives from the organizational objectives is to provide the treatment plants with automation. This automation would be one of the main drivers for increased efficiency in data monitoring and regulatory reporting and reduced workload and maintenance cost. The recommendations from this assessment will be the catalyst for automation projects at the pumping stations over the next 20-year planning period. In addition, the recommendations from this assessment are required to be prioritized in 5-year increments with estimated costs.

Old CIP# 1401

Driver:

Challenges: Standardization of multiple different data process equipment already installed throughout the 5 plants could be a problem.

2019	120	955	229	1,000	1,500	2,000	2,000	2,000	2,000	11,804

Manager: Todd King Managing Dept Field Services

Fund: 5519 Cost Center: 882111

PROJECT INFORMATION

Scope of Work: Evaluate the existing conditions, provide the necessary replacement/ rehabilitation option, design and implement them.

Project History: There are critical valves that are required to be closed during a main break or an emergency situation. There has not been a regular valve exercising program in past 15 years in the DWSD/GLWA System.

Driver: 1 - Condition

Challenges: May require shutdown of large transmission mains.

Other Important Info: GIS, Section Maps and Gate Books are available for reference

Transmission System Valve Rehabilitation and Replacement Program

Describe Here the Changes from the 2018 CIP to 2019 CIP

CON-181 Contractor is selected and is soon to start. Financial group moved funds from the future years to FY2018 and FY2019

CIP Version	FY16	FY17	FY18	FY19	FY20	FY21	FY22	FY23	FY24 and Beyond	Total
2018			2,930	3,100	3,100	3,100	3,100			15,330
2019			2,000	4,000	4,000	3,274	726	4,000	4,000	22,000

Project Title Water Transmission Main Asset Assessment Program

Project Significance Many of the water mains serving the GLWA service area were installed in the early part of the 20th century or the later part of the 19th century, and are now reaching the end of their useful life span. This project will pilot and utilize new technologies to accurately identify the condition of these buried assets by constructing access ways for inspection and the installation of sensors and fiber optic cables for real-time monitoring of condition. It's essential for cost-efficient repair and replacement programs which in turn will increase the reliability and performance of the system.

Year Added: 2017		CIP Type: Program

Managing Dept Field Serv	vices				

PROJECT INFORMATION

- Scope of Work: Construct access structures and utilize new technology to evaluate the existing conditions of the transmission system. Construction of in place sensors and cables may be necessary to adequately access condition. Provide the necessary recommendation for replacement and rehabilitation.
- Project History: There are many critical assets that are required to be operated in the transmission main, but the authority doesn't know the existing conditions. For planning purposes, information about the actual condition of pipes is needed and there has not been a regular condition assessment program related to the transmission System (pipes greater than 24").
- Driver: 1 Condition
- Challenges: Gaining access to inspect buried pipes is difficult, disruptive and costly. However, there are ways to monitor and test the condition of the piping and methods of performing condition assessment

Water Transmission Main Asset Assessment Program

Other Important Info: *Innovation Note: Consider new techniques for water main assessment. GIS, Section Maps and Gate Books are available for reference

Project Title Suburban Water Meter Pit Rehabilitation and Meter Replacement

Project Significance Improving meter data reliability, ensuring accurate billing, improving customer service and allow high quality analysis of the system

Year Added: 2014 Date Original BCE Prepared: 1/26/2016 Date BCE Last Updated: 10/13/2017 Project Engineer/Manager: Chandan Sood Title: Manager Phone: (313) 267-9007 Email: Chandan.Sood@glwater.org Manager: Chandan Sood Managing Dept Systems Planning

CIP Type: Program Budget: Water Project Classification Level 1: Water Project Classification Level 2: Programs Project Classification Level 3: Programs Project Location: Multiple Counties Fund: 5519 Cost Center: 882111

PROJECT INFORMATION

- Scope of Work: The Proposed improvements should include the following; The replacements of meters that have surpassed their life expectancy, and or the current flow rates exceed the mechanical limits of the meter. Installing entrance hatches that allow safer ingress, and egress, and that can be locked for security. Sand blasting and painting of piping and walls. Waterproofing meter vaults to keep the ground water out. Provide a proper floor slope in meter chambers that allow water to settle in puddles. Repairing damage sump pump discharge lines. Repairing any structural deficiencies in the meter chambers, loose concrete, bricks, and ladder rungs. Installing access tunnels for the meter location that require extensive traffic control, or are very dangerous to enter because of the entrance location. Upgrading and repairing damaged electrical fixtures in the meter vaults. Weather proofing the meter control cabinets, chalking, replacing rubber door seals, replacing missing foam insulation, replacing upgrading cabinet heaters, repairing damaged locking mechanisms. Improving, or paving the access roads, and or parking for meter locations that have limited parking or get overgrown with foliage in the summer time.
- Project History: Currently GLWA provides water service to 126 communities, and measures flows and volumes by the utilization of 290 wholesale water meters now in service; 17 of these meters are venturi-orifice type meters, 26 of these are dual venturi type meters, 48 of these single venturi type meters, 97 of these are magnetic flow type meters, and 102 of these are turbine or mechanical type meters. Meters were installed between 1945

Old CIP# 1303

through 1975 under various projects and tasks.

Driver: 2 - Performance

Challenges: Requires temporary shutdown of the water supply through the meter

Other Important Info: n/a

Related Project: PC-793 provides mechanical help for in-house meter replacement

PROJECT INFORMATION

- Scope of Work: This project encompasses the evaluation of all Water Treatment Plant and Booster Pump Station roofs to determine their current condition and to prioritize their repair or replacement. The project will evaluate the type of roof, built-up roofing material, flashing, roof drains/conductors and sealing materials that comprise the building envelope. The findings of the roof survey and evaluation will be used to prioritize roof repair and replacement projects for design and construction.
- Project History: Majority of GLWA Water Plant facilities have Built-Up-Roof (BUR) membranes systems commonly referred as "tar and gravel" roofs. Majority of the more than 70 roofs, are over 15 years old and few are even older up to 30 years old. In many instances, inadequate roof system maintenance has been provided.
- Driver: 1 - Condition
- Weather dependent and seasonal work. May require management of several construction projects simultaneously to complete the work. The project Challenges: should include but, not be limited to the following, material testing for hazardous materials, thermal scans and condition analysis.

Other Important Info: *Innovation note: use cool roofs
