Public Comment to GLWA Board Mtg.

New technology will bring superb water and wastewater treatment at a very low cost.

Now we have a Greenfield Village technology, which is updated at high cost and no improvement of the operations.

We need anaerobic digestion of sludge, ozone disinfection, deep ditches for rainwater, fast and safe distribution of potable water.

We need scientists and engineers in proper invention and application at the helm of management.

It can and must be done as soon as possible.
