

Vendor Response Follow-up

Owner: Great Lakes Water Authority (GLWA)

Contract No.: 1900741

Title: Professional Engineering Services for the 96-Inch Water Transmission Main Relocation

Proposal Due Date: July 31, 2019

Pertaining to the contract number and description above, we see that your firm reviewed the solicitation but did not provide a proposal. We're very interested in our Vendor's feedback and ask that you please complete the information below with an explanation of No Bid Submittal by the end of business 1-3-20 (or sooner if possible). Your response is valued and greatly appreciated!

Vendor	Contact Name	Email Address	Explanation of No Bid Submittal
OHM Advisors	Erin Valmont	Erin.valmont@ohm-advisors.com	We missed the notice on Bonfire, caught it in time to make the Pre-Proposal Meeting/Walk-thru, but were too late to the game to partner effectively.
National Welding Corporation	Jared Bradfield	jared@national-welding.com	We are a field welding subcontractor and therefore did not submit a proposal to provide Engineering Services for this project. We will be interested and submit a bid to the interested prime contractors when this project is advertised for a construction proposal.
Kennedy Industries	Keith Sikaitis	ksikaitis@kennedyind.com	We are an equipment supplier of pumps and valves and were looking at the Project from the prospective of supporting the Engineering Companies that would be submitting a Bid.
WSP	James Rydquist	James.rydquist@wsp.com	The timing related to the release of the RFP determined our internal no go decision. The project was shown to be released in 4-9 months according to the procurement pipeline at the time it was released. Having it released early according to this information did not allow us to complete the needed pre-proposal planning and teaming necessary for a project this large. The early release also sends an indication that the work may have been geared toward the engineering firm that completed the preliminary design as they would not need the upfront time to plan and review the work already complete.
Wade Trim	Dennis Prevo	dprevo@wadetrim.com	Wade Trim entertained pursuing this project. However, we felt that we didn't fully meet the pre-qualifications as a Prime Engineering Consultant. In addition, we had limited background knowledge of the project. Our preference would have been to play a role as a subconsultant. We had discussions with potential prime partners but didn't find the right teaming fit. As a result, we decided to pass on this opportunity.
