and they do it now for 200000 customers out of 3.5 million customers. Even at Water Park Facility they do not track virus and they do not know if the treatment is sufficient. I have people in there and they tell me about what they do. However, there they still use chlorination. Thus GLWA is not doing anything about COVID 19 crisis in its service area. One may say that previous virus exposure might have produced antibodies, but it was not enough in the present case. Laying off experienced chemists brought this disaster. SS
