---

Michigan State University researchers found abundance of viruses in GLWA wastewater, what may cause public health problems. We may find the same situation with GLWA drinking water. Anyway this was expected without ozonation or uv light for disinfection. As Walrus had said, the time has come to talk about ozonation and uv disinfection at GLWA and do something about it. MSU undertook this study in response to Covid 19 crisis. Saulius Simoliunas, 665 W. Warren Ave, Detroit, MI 48201, 313 465 5786, [saulius@ieee.org](mailto:saulius@ieee.org)
